

**Declaration of Conformity**  
**to the Standard ČSN EN ISO 1461**

Product description:

It is a Fe-Zn coating on the surface of the steel parts created by the hot dip Zinc galvanizing process.

Function of the coating:

While respecting environmental principles, the coating prevents the product against corrosion on long term basis and provides higher mechanical endurance, It prolongs lifetime and increases added value of the steel products.

We declare and confirm the following:

Created Zinc coating meets the requirements of the Legal Act No. 102/2001 of the Collection of Laws regarding general safety of the products, conformity declaration according to § 3 paragraph No. 5 of the Act in compliance to the standard ČSN EN ISO 1461 - „Hot-dip Zinc coatings created by dipping of the iron and steel products”

Following standards were used on determining the compliance (standards for determining the general properties of the Zinc coatings on the surfaces of the steel products):

- ČSN EN ISO 1461 Hot-dip Zinc coatings on iron and steel products applied by dipping.
- Specifications and test methods – ČSN EN ISO 14 713 Protection of the construction against corrosion.
